BUILDING END-USE

Crop Production Services

The original barn was used for raising hogs and was an integral part of a growing farm operation. The owner did not want to tear down the structure and build just any old barn/office, so S purlins 4 o.c. were installed over the existing structure.

They also added 12" of insulation in the ceiling; 6" in the walls; built new overhangs and resheathed the exterior. The interior was rebuilt using old barn wood from neighbors. A new lean-to was constructed to blend with the existing structure.
