BUILDING END-USE

Multi-Purpose Athletic Facility

An excellent example of a metal building achieving a classic architectural look, the McCreary Field House was designed to fit the intimate and iconic atmosphere of the Reynolds Campus. Created to benefit all 18 of the Wake Forest athletic programs, it features a 120 yard football field, weight lifting facilities, and ample space for teams to train year-round regardless of weather conditions.

The exterior is a combination of insulated metal panels, masonry, aluminum cornice assembly, and a special order painted roof system.
