

Waypoint Aviation

Hangar

LOCATION

Cincinnati, Ohio

SIZE

40,000

WALL SYSTEM

Architectural III / Insulated Panels

ROOF SYSTEM

Standing Seam II

This newly constructed corporate jet hangar located at Cincinnati Municipal Airport at Lunken Field is a Fixed Base Operation (FBO) and is a one-of-a-kind design. It is the first ever FEMA compliant facility to be constructed at Lunken Airport. Additionally, the hangar can accommodate a variety of aircraft including but not limited to the new Gulfstream 650 and Bombardier Global 7000.

The FBO features three acres of ramp space that nearly any aircraft can easily taxi to. Waypoint is also the first and only FBO at Lunken to offer a self-serve Avgas pump to the growing aviation community. The full service FBO is open to serve 24/7 with state-of-the-art security to ensure customer safety and privacy. There is direct access to the terminal from the ramp offering an efficient arrival or departure.

The main building is 150' x 200' gable symmetrical with a 30' wide lean-to. The main building has a 120' x 28' Higher Power hanger door centered in the left endwall. Due to the building residing on a flood plain, all exterior and interior walls are flood proof up to 20' with flood vents to allow protection in the event of a flood.

Innovation. Technology. Solutions.
