Standing Seam 360

BUILDING END-USE

Athletic & Recreation Complex

To expand the opportunities for students to develop physically, intellectually, spiritually, and socially, Johnson University chose an American Buildings pre-engineered metal building for their new Athletic & Recreation Complex – the ARC. The facility includes two NCAA regulation-size basketball and volleyball courts, a 75-foot x 75-foot swimming pool with ten lanes, an aquatic center, a workout facility, and a game room.

It features a 6,100-square-foot indoor recreation and athletic room with artificial turf. There is a mezzanine level above the locker rooms, containing a conference room, team video viewing and training area, offices, reception room, video, and audio rooms with a camera platform, and an IT room. American Buildings supplied the metal roof and wall panels. An accent wall with a translucent panel was incorporated into the metal panels in the atrium of the entrance to allow for natural light throughout the space.
