

Barrett Warehouse

LOCATION

Lake Park, GA

SIZE

5,000 sf

WALL SYSTEM

Shadow Panel

ROOF SYSTEM

Standing Seam II

BUILDING END-USE

Antique Tractor Storage

This building was designed to house an antique collection of John Deere Two Cylinder tractors and vehicles, while also serving as a weekend getaway. Terra cotta wall color and white trim was used to resemble an old barn. The 3-foot overhang on all sides contributes to the building's classic look. Additionally, downspouts, sectional garage doors, and imitation attic doors with an "X" at the gables were used to correspond with the rustic theme.

The 21.7 tons of metal material used to build the storage barn requires low maintenance. The cost effectiveness and low environmental impact helped create a functional, simple storage unit with curb appeal.
