

New Flyer of America

LOCATION
Anniston, AL

SIZE
79,603 sf

WALL SYSTEM
Architectural III

ROOF SYSTEM
Standing Seam II

New Flyer is the largest transit bus manufacturer in North America, with fabrication, manufacturing, and service centers in the United States and Canada. To continue building on their 85 plus year legacy of innovation to deliver innovative transit technology that meets the complex demands of communities today and into the future, they embarked on a \$25 million expansion in Anniston, AL. The expansion integrated an additional 79,603 square-feet to the now nearly 400,000 square-foot facility. The addition includes overhead cranes, which allow for transit bus part fabrication in house and centralizes the plant's welding process, utilizes an ABC pre-engineered metal building and has a symmetrical gable design. The main building was created with a rigid frame multi span. The structure is clad with American Building's Standing Seam II roof system and Architectural III wall system.
