**LOCATION**  
Medford, OR

**SIZE**  
22,500 sf

**WALL SYSTEM**  
Insulated Metal Panels

**ROOF SYSTEM**  
Standing Seam 360

This custom American steel building provides replacement operational facilities for Mercy Flights, Inc., a non-profit organization providing ground and air ambulance services to the Rogue Valley in Southern Oregon. This project included the demolition of existing buildings and construction of a new campus, including the aircraft hangar, ground ambulance maintenance shop, dispatch and operations & training building, and a covered ambulance parking.

Approximately one-third of the floor plan is a ground ambulance maintenance shop separated from the 3-bay aircraft hangar which occupies the remaining space. The south exterior wall is flanked by metal canopies that provide protected parking for the ambulances. The north side of the building makes use of three hangar doors that have clear openings of nearly 60' wide and 28' high. Two separate and free-standing canopies provide additional covered parking for ambulances around the site.
