

November 2021

Energy regulations in steel building construction continue to be complex. We understand the importance of knowing state energy codes prior to starting a construction project. That's why we have a dedicated team of energy experts committed to providing you with up-to-date code information and tools to navigate the construction process.

Our dedicated Energy Team is available to assist you directly or through our Energy Hotline. Our Energy Hotline assists our Builders with their energy code questions and makes it easy to find the most cost-effective energy solution for your projects. Energy Team members can help with State energy code requirements, provide COMcheck support, and provide proprietary tested and modeled data to comply with energy requirements. Our experts can walk you through potential metal building solutions and put you in touch with the Sales Representative in the region your project is located.

In addition to our Energy Hotline, an interactive Energy Code Map is available to our Authorized Builders on the Builder Dashboard and Toolbox app. The Energy Code Map allows Builders to look up energy code information for a particular state by clicking on the state or using the dropdown menu to view current energy codes for that state.

To access the Energy Code Map click here:
