Long Span III

Royal Blue

ROOF SYSTEM

Standing Seam 360

Galvalume

BUILDING END-USE

Material Packing & Handling

This 79,800 sf warehouse and distribution center is an expansion of an existing building. The expansion will house a new custom sheet metal office and warehouse area. This building also features insulation for sound denting purposes, and will be used for material packing and handling.

The American Buildings Standing Seam 360 roof systems are designed to float on a system of sliding clips that prevent damage from thermal expansion and contraction. The Long Span III panels used to design this building, provide an even-shadowed appearance and are reinforced between the ribs, to give the structure added strength.
