# EXCELLENCE IN DESIGN

AMERICAN BUILDINGS' EXCELLENCE IN DESIGN BUILDING OF THE YEAR: NW Line JATC

# 2024

# 2024 EXCELLENCE IN DESIGN

THESE **AWARD-WINNING PROJECTS** HIGHLIGHT THE **DIVERSE** APPLICATION AND **EXPANDING BOUNDARIES** OF THE METAL BUILDINGS INDUSTRY.

American Buildings is proud to announce the winning projects in our 2024 Excellence in Design competition. The powerful partnerships we've forged with our Builders help bring these award-winning projects to life in categories ranging from recreation to retail, and aviation to manufacturing.

Through this competition, we offer Builders an outlet to exhibit their creativity and workmanship and illustrate how metal building systems meet the diverse needs of their customers, regardless of a project's scale or intricacy. We collaborate with Authorized Builders to transform ideas into reality and continuously expand the possibilities of metal building systems construction.

INNOVATION.  
TECHNOLOGY.  
SOLUTIONS.

# GOLD

This state-of-the-art facility serves as headquarters of the Northwest Line Joint Apprenticeship Training Committee and a training center for aspiring linemen—skilled professionals who specialize in high-voltage power lines. The project encompasses two custom metal buildings totaling over 40,000 sf. The main building boasts eave and ridge heights of 32' and 48', respectively, sufficient to house lineman poles in a 14,000 sf indoor training yard. Amenities include a mezzanine that overlooks the training area, translucent wall panels that convey natural light, classrooms, office, and storage. A 18,000 sf structure houses a board room, conference and break rooms, offices, a commercial kitchen, and three partitioned classrooms that easily convert into a 5,000 sf multipurpose room. An IMP roof helped the project meet code requirements, while the walls utilize a stylish mix of IMP, CMU, and flat panel siding.

# SILVER

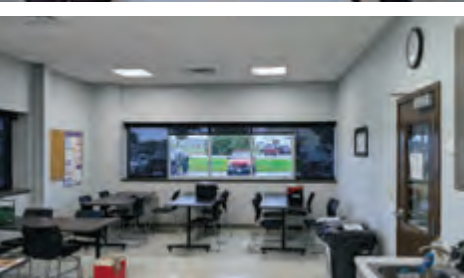

This project comprises three interconnected custom metal buildings—a warehouse, a retail and office space, and a showroom—for one of the largest suppliers of structural building products, components, and services in the U.S. residential construction market. The warehouse features an off-ridge monitor with clerestory windows for daylighting. The retail and office building is perpendicular to the warehouse, requiring a large hip with varying roof pitches to accommodate differing ridge heights. It also features five large roof top dormers and a mezzanine, with an elevated mechanical platform and interior stairwell opening. The showroom's custom metal framed entry and variable roof pitch entry canopy convey style. Each building features American's Loc Seam 360 roof system and R-Panel and Reverse R-Panel wall panels in differing colors, providing visual contrast and interest.

# BRONZE

Combining manufacturing and office space, this 44,800 sf facility is the new home of Legacy Steel—a service center offering steel fabrication, welding, and painting. The 42,000 sf manufacturing area includes a 5-ton top running crane and ample room for fabrication and a powder coating paint line. A covered courtyard and main entry echo the building's frame shape and proportions, creating visual interest. Steel soffit panels appear to flow continuously from the exterior overhang into the front entry and reception areas, maintaining angles formed by the exterior steel framing. This makes for a unique and intriguing interior design with sloped walls, ceilings, and windows that admit generous amounts of natural lighting throughout. Insulated metal roof and wall panels top off this project, offering an efficient and aesthetically pleasing building envelope.
