CICP Expands and Opens Classes

As the industry's best Builders, we understand your commitment to providing quality service. To prepare our Builders to install our products as properly and efficiently as possible, Nucor Buildings Group has recently created the new Contractor Installation Certification Program (CICP). This program is very similar to American's existing CICP.

The CICP is a two-and-a-half-day program recommended for erectors and supervisors who oversee roof installations. After an individual successfully completes the program, they will be equipped with the required information, skills and competency to supervise onsite installation of American products.

CICP completion also provides qualification for our industry-leading warranty program. American has recently announced a streamlined [Weathertightness Warranty Program](#). In addition to our Standard Weathertightness Warranty, we will now be also offering a **Standard No Dollar Limit** and **Premium No Dollar Limit Weathertightness Warranty**.

To qualify for both No Dollar Limit Weathertightness Warranties, the Builder is required to have representatives who will be supervising roof installations successfully complete the CICP.

CICP classes begin this spring and will now take place at the new CICP Laboratory in Waterloo, IN. In addition to hands-on assembly of full-scale roofs, with opportunities to install trapezoidal and vertical standing seam roof systems, roof-to-wall interfaces, ridge assemblies, and more, tours of both the Nucor Buildings Systems manufacturing plant and the Nucor Insulated Panel Group facilities at the Waterloo campus are included.

Visit our [website](#) for more information about the CICP Program and to register for an upcoming session.

Upcoming CICP Schedule

March 8 -10, 2023

May 10 - 12, 2023
