Galvalume

BUILDING END-USE

Theater & Concert Venue

Mickey's Black Box is a world-class venue personally designed by Mickey Tait, an innovative set and stage designer. Made to function as a concert or theater, the facility holds 500 occupants in total. When used as a theater, there are 178 seats on the first floor and 100 on the balcony. In a concert setting, the first-floor seats are recessed into a pit, and a concert floor is lowered from the ceiling.

This structure has many unique features, including custom balcony framing/seating, five mezzanines at different elevations, custom-built catwalks, and an entrance canopy with carnival lighting. Mickey's Black Box was designed with 3-1/2" shotcrete on the walls and a DensGlass spring-mounted ceiling system with suspended plywood for sound and noise control. A special, custom color of black was chosen for the wall panels and trim.
