

Pitt-Ohio

LOCATION

Parma, OH

SIZE

95,765 sf

WALL SYSTEM

R-Panel, Slate Gray

ROOF SYSTEM

Loc Seam, Regal White

BUILDING END-USE

Transportation

Staying true to their commitment as a responsible partner in future sustainability, Pitt-Ohio, a leader in the trucking industry, significantly invested in a new 95,765 sf facility that received Gold LEED status. This American Buildings pre-engineered metal building features a terminal, mechanic shop, office, and warehouse.

Dedication to environmental and social responsibility is evident in numerous design decisions, such as choosing metal construction due to its sizable percentage of recycled content, a metal roof system utilizing cool coatings and the addition of solar panels to support an overall microgrid effort for the facility, energy efficient light wall panels allowing natural light. The installation of eight wind turbines onsite capture and store additional natural energy for the facility's use.
