

# Rugged Radios

## LOCATION

Arroyo Grande, CA

## SIZE

26,000 sf

## WALL SYSTEM

Reverse R-Panel

## ROOF SYSTEM

Standing Seam II, Galvalume

## BUILDING END-USE

Manufacturing/Commercial

The 15,000 sf flagship building for Rugged Radios features accent columns and trim, a structural steel tower, and varying wall panel and trim colors to enhance the architectural design elements. Two 5,000 sf ancillary metal buildings showcase a traditional style with parapets, special accent trims and glass sectional doors. A small metal building anchors the corner of the development and was designed to emulate an old gas station.

Small, yet complex, this building has a level canopy and utilizes insulated metal panels, soffits, and special trims. The vintage radio tower and gas station theme made the project a shoo-in to be constructed of metal building products, providing the campus with a feeling of an era gone-by with the modern efficiencies of a wide-open structure.
