

All American Ford

LOCATION

Pell City, AL

SIZE

16,500 sf

ROOF SYSTEM

SSII Standing Seam, Galvalume

BUILDING END-USE

Ford Dealership & Service Center

All American Ford Dealership and Service Center was designed using five metal framing structures, leaving the auto dealership with a showroom, new car delivery, service drive, shed, and service area. The service and service drive buildings utilize full-height liner panel.

The 94' x 86' clearspan showroom has an eave height of 17' and is lined with windows, admitting natural lighting and elevating the structure's appeal. The front facade uses full-height aluminum composite panels, and the remaining perimeter features horizontal and vertical PBC panels.
