

Florence Fire Station No. 4

LOCATION

Florence, SC

SIZE

7,150 sf

WALL SYSTEM

A-Panel, Charcoal

ROOF SYSTEM

Standing Seam 360, Pearl Gray

BUILDING END-USE

Fire Station

The city of Florence needed a fire station facility to provide coverage of the growing population, improving response times and allowing the department to maintain its Class One Rating. Two single slope buildings provide separate areas for the fire apparatus and admin space — the buildings meet in the center for a unique look at the connector. The apparatus building's design includes six 12' x 14' framed openings for overhead doors. A clean white masonry finish varies in height around the structure, adding dimension and complimenting the charcoal exterior wall panels and red overhead doors.
