

Fly Exclusive Hangar

LOCATION

Kinston, NC

SIZE

48,000 sf

WALL SYSTEM

R-Panel, Sandstone

ROOF SYSTEM

Standing Seam 360, Cypress Green

BUILDING END-USE

Maintenance Hangar

Fly Exclusive Hangar was built using a 220' x 150' gable symmetrical structure with a 50' x 150' lean-to, and is used for general maintenance and private jet refurbishment. American Buildings provided a framed opening for the 113' x 28' Southeast Powerlift Hydraulic door.

The attached two-story lean-to structure features 7,500 sf of mezzanine space. The mezzanine is used as a second-floor upholstery restoration, small parts paint booth, and various support offices. The interior of both buildings is fully-lined, and the liner panel in the mezzanine space is polar white.
