BUILDING END-USE

Retail/Warehouse

A three-building expansion attaches to the existing single slope Salvation Army warehouse, previously built by American Buildings. One single slope and two lean-to-framing systems provide an additional 49,500 sf for retail. Both lean-to structures have skewed walls.

All three building parts encompassing the retail addition have rigid insulation, a membrane roof over the roof deck, and parapet walls. Multiple roof and wall framed openings add to the design, housing roof accessories, windows, and a glass storefront. Seven architectural canopies hang from the exterior walls.
