#### BUILDING END-USE

Maintenance Shop

This 100' x 248' maintenance shop is attached to a custom-designed front office and parts area for JD Eckman, a full-service construction company. The shop has many great features, including heavy-duty reinforced and hardened concrete floors, exterior canopies, a mezzanine for storage, waste-oil-fired in-floor radiant heat, a large wash bay, concrete aprons, compressed air and lubrication systems, and large fans.

It is also fully equipped with two 5T crane bays and vertical lift overhead doors, allowing them to handle even the most complex projects. More office space will eventually be attached to the shop, so the design incorporates future expansion.
