IMP  
Slate Gray

## ROOF SYSTEM

IMP  
Slate Gray

## BUILDING END-USE

Admin Offices/Maintenance

This 30,000 sf facility was built for Pasco School District in Washington. A conventional steel office and two American pre-engineered metal buildings are combined to service all the transportation vehicles for the school district and house administrative offices.

Two single slope structures form a maintenance area that is used for fabrication, storage, equipment, and a bus wash. The maintenance bay holds 5 Steril-Koni Diamond lifts, a 2-post above-ground lift, a 4-post above-ground mobile bus lift, and a full lube system. The two-story conventional office has driver and staff breakrooms, a driver training area, conference rooms, and a full kitchen.

Slate gray insulated metal panels accentuate the exterior roof and walls, and the interior face of all the panels is imperial white. Prismatic skylights adorn the roof of the maintenance bay and all the overhead framed openings use 3" IMPs for the jamb and header cover trim.
