## BUILDING END-USE

Fire Station & Community Center

The Tridell Fire Station & Community Center in Tridell, Utah is just over 12,000 sf and is designed to serve a dual-purpose as a fire station and community center. This facility combines a 3,762 sf single slope office building, a 3,243 sf multipurpose building, and a lower gable 5,216 sf shop equipped with bays for fire apparatus and equipment.

The office structure features a full-width mezzanine above one bay, while the community building includes a full mezzanine spanning 72' x 44' with no interior support columns - creating open space for fire offices and community gathering space below.

The building is accented with Red Primer structural columns, adding a bold visual element. The exterior features Reverse R-Panel in Charcoal, accented with brick for durability and aesthetic appeal. A Standing Seam 360 roof in Dark Bronze completes the exterior with a sleek, weather-resistant finish.
