Standing Seam 360
Galvalume

BUILDING END-USE

Truck Repair, Fabrication & Office

Spanning more than 30,000 sf, the Papillion Sanitation headquarters in Bellevue, Nebraska is a thoughtfully designed facility that balances performance and modern aesthetics. The exterior architecture is defined by insulated metal panels in the Mesa profile, finished in a refined palette of Slate Gray and White. Bold blue exposed structural framing directly references Papillion Sanitation's brand identity, and a glass curtain wall spans the entry façade, allowing abundant

natural light to pour into the interior. Inside, an open layout maximizes daylight throughout, promoting productivity, comfort, and collaboration. A partial mezzanine, constructed using an Ecospan Composite Floor System, adds valuable second-floor workspace and private offices while maintaining visual connectivity to the spaces below. The operational core of the facility is its specialized truck repair shop, equipped with a 5-ton overhead crane and two 10-ton overhead cranes, enabling efficient handling of large vehicles and components, while multiple overhead doors provide seamless access for trucks and equipment.
