LOCATION

Tallahassee, FL

SIZE

160,000 sf

WALL SYSTEM

Insulated Metal Panel
Regal White

ROOF SYSTEM

Standing Seam 360
Regal White

BUILDING END-USE

Manufacturing

Danfoss Horizon serves as a state-of-the-art manufacturing facility designed to support the continued growth of Danfoss Turbocor, a world leader in innovative compressor technology. The gable symmetrical structure, measuring 475'x 259', has multiple mezzanines and encompasses more than 160,000 sf of space dedicated to production equipment, assembly lines, offices, warehouse functions, and supporting spaces.

The exterior has a clean, contemporary aesthetic that is achieved with insulated metal wall panels in Regal White, complemented by expanses of glass and EIFS elements that coordinate with the existing buildings on the Danfoss campus. The entire erection of the steel, wall panels, roof system, and mezzanines was completed in just 13 weeks, achieving dry-in status on an accelerated schedule to meet operational demands.
