BUILDING END-USE

Grocery Store

Esh's Grocery is a 19,434 sf grocery facility featuring a combination of three single slopes structures and three lean-tos, giving the structure a varied, dynamic roofline while allowing the interior column layout to align naturally with the market's aisles and departments.

The exterior showcases a horizontal tri-color palette of Metl-Span's Tuff Wall® insulated metal panels, in a mix of neutral colors. The Tuff Wall panels offer an attractive stucco-embossed finish, complemented by a stone veneer for a distinctive, upscale storefront look. American's Standing Seam 360 roof in Galvalume and Midnight Black tops the building, providing durable, low-maintenance weather protection.

At the main entrance, an awning with unique double-column supports creates a strong architectural focal point, while two at-eave canopies extend the building's presence along its facade. Together, these design elements reflect American Buildings' ability to deliver pre-engineered structures that combine everyday functionality with genuine curb appeal for retail and grocery clients.
